

UX Case Study

MOVVA

Your Ride, Your Way

Graduation Project

What is MOVVA? Overview

Intercity Ride-Sharing App
With A Unique Carpooling Feature For Long Distances

It Records The Pre-Planned Trip And Displays Available Seats.

Searches For An Available Trip And Books A Seat At A Discounted Price.

Save Up To 60% Compared To Taxis And Public Transport

(iOS & Android) Mobile App

Problem

1500

Average cost in pounds
Cairo to Asyut taxi

High cost

Long-distance travel is very expensive for individuals, especially for students and employees.

Empty seats

The driver travels in a car with 3-4 empty seats—a loss for both parties.

Inflexible transportation

Buses and trains aren't always on time or heading to the right destination.

If Someone Is Traveling Along The Same Route, Why Should I Pay Three Hundred Pounds All By Myself ?

Research & Insights

Key Features

Publishing The Trip

The Driver Adds Their Trip, Including The Date, Time, Locations, Number Of Seats, And Price.

Smart Search

The Passenger Searches For Available Trips Based On Destination And Date, And Views Each Driver's Rating.

Verification And Security

The Passenger Searches For Available Trips Based On Destination And Date, And Views Each Driver's Rating.

Electronic Payment

Secure In-App Payment With Protection For The Passenger's Funds Until The Trip Is Confirmed.

Real-Time Notifications

Instant Notifications Upon Request Acceptance, Trip Start, And Approaching Arrival.

Driver Statistics

The Driver Can View Their Earnings, Past Trips, And Passenger Ratings.

Design decisions

Q1 : Why is the driver's rating shown before booking?

Trust is the primary hurdle—passengers need to see the driver's rating and trip count before paying

Q2 : Why does the driver accept the request manually?

It gives the driver full control over who rides with them—this is the most important concern that emerged from the research.

Q3 : Why is the taxi price comparison displayed?

To save money and check the app's benefits.

Challenges & Solutions

Users' trust in strangers

Complexity of the driver experience

Persuading the user to switch away from taxis.

Coordination between the driver and the passenger

Identity Verification and Trip Sharing

Simplifying the trip addition form

Show price differences everywhere + genuine reviews

Pinpoint a precise meeting spot on the map + integrated chat.
